

DEM10 Compact

DEM10

A dehumidifier removes the excess moisture that we create on a daily basis through activities such as running baths, using washing machines and drying laundry, all of which could lead to condensation, damp and mould. A dehumidifier can help maintain a more constant level of humidity and alleviate these conditions. The higher the extraction rate, the more condensation will be controlled. An efficient unit will typically have a lower running cost.

- **DEM10**
- New highly efficient compact dehumidifier: - 10 litres (18 pints) extraction / 24 hours (at 32C 80% RH)
- Compact dimensions only 42cm high with pull up handle for easy carrying
- Humidistat to set moisture to comfortable level and save energy
- Electronic anti-frost device for lower temperature use
- 2 litre capacity tank with visible water level
- Permanent drain facility (plumbing kit supplied)
- Tank control system
- Quiet operation
- Washable dust filter
- Collects demineralised water (ideal for use in steam irons etc)
- Ecological gas R134a
